

Place les mots suivants au bon endroit :

*planets – gas – Sun – Earth – space – ball – one hundred –  
burning – star – live – light – sky – gravity – Solar system –  
giant – Solar system – ninety-nine – Sun – big – one million –  
heat*

The ..... is a ....., just like many of  
the stars that you can see in the night .....

Just many times closer to. In fact, the .....  
makes up for ..... percent of the mass of the  
.....

The Sun is so ..... that it's more than .....  
times wider than the .....

And if it were a ..... jar you could fit more  
than..... Earths into it. More than that, the  
Sun is what holds the .....  
together. Its massive ..... is what keeps the  
Earth and all the other ..... circling around it  
instead of drifting into .....

The Sun is also what allows us to ..... on  
Earth. Without the Sun, there would be no .....,  
there would be no .....

The Sun gives us heat and light because it is always  
.....

It's a giant ..... of .....
